CUSTOMER INSIGHTS

Customer behaviour analysis

Turn a cleaned shopping dataset into clear business signals: who spends, what they value, and where to act.

Made with GAMMA

The dataset is ready for decisions

The technical work now supports customer, product, shipping, and subscription insight.

01

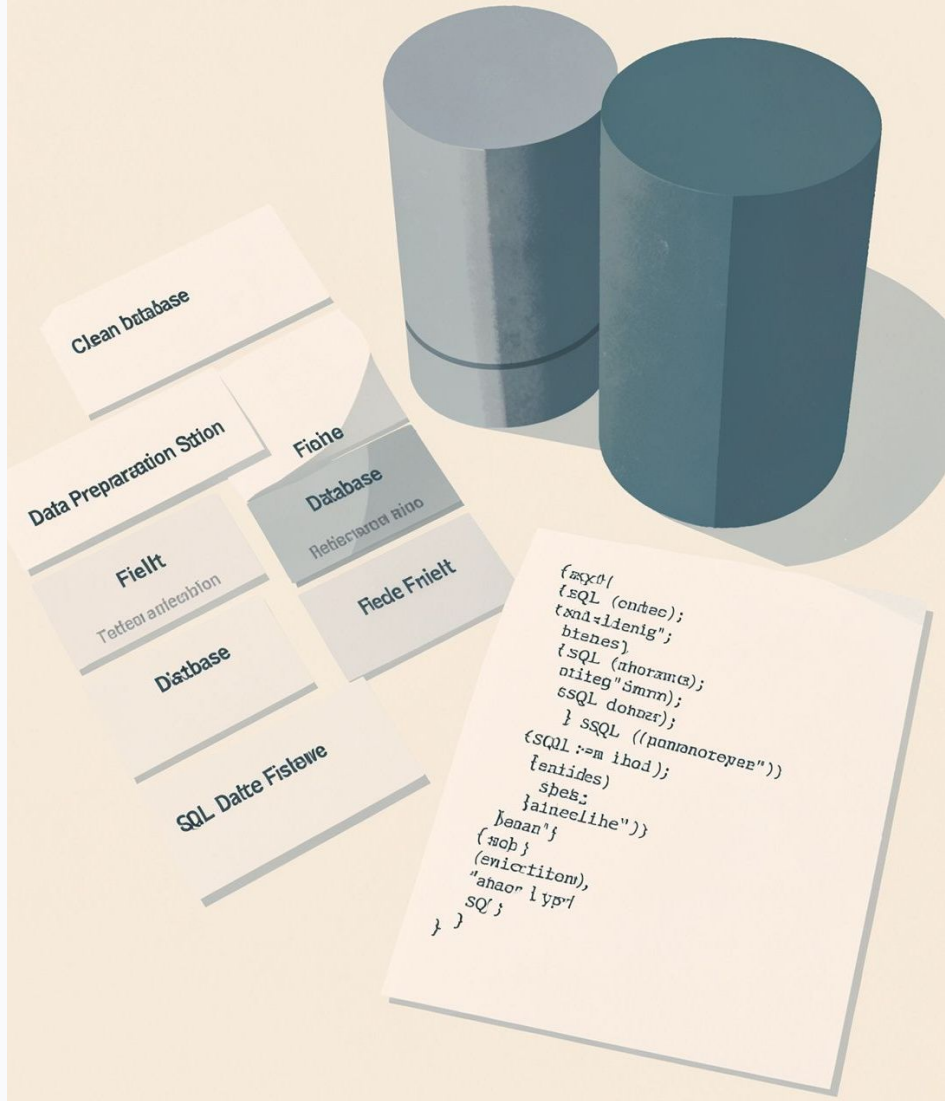

Prepare with Python

Handle missing review ratings by category, standardize field names, and prepare the data for SQL.

02

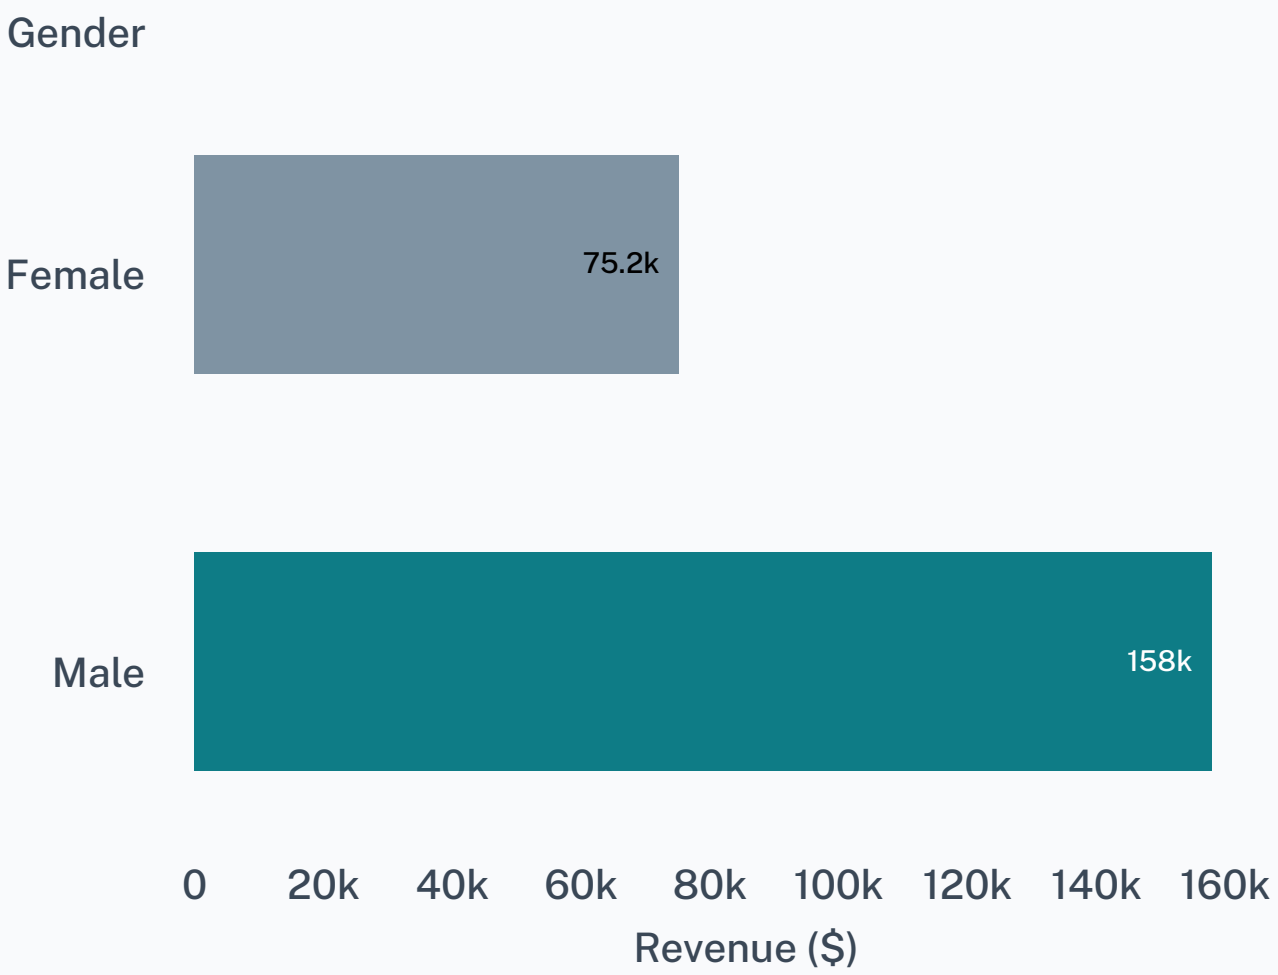

Query with PostgreSQL

Turn transaction-level records into customer, product, shipping, and subscription insights.

Made with GAMMA

Revenue is concentrated in male customers

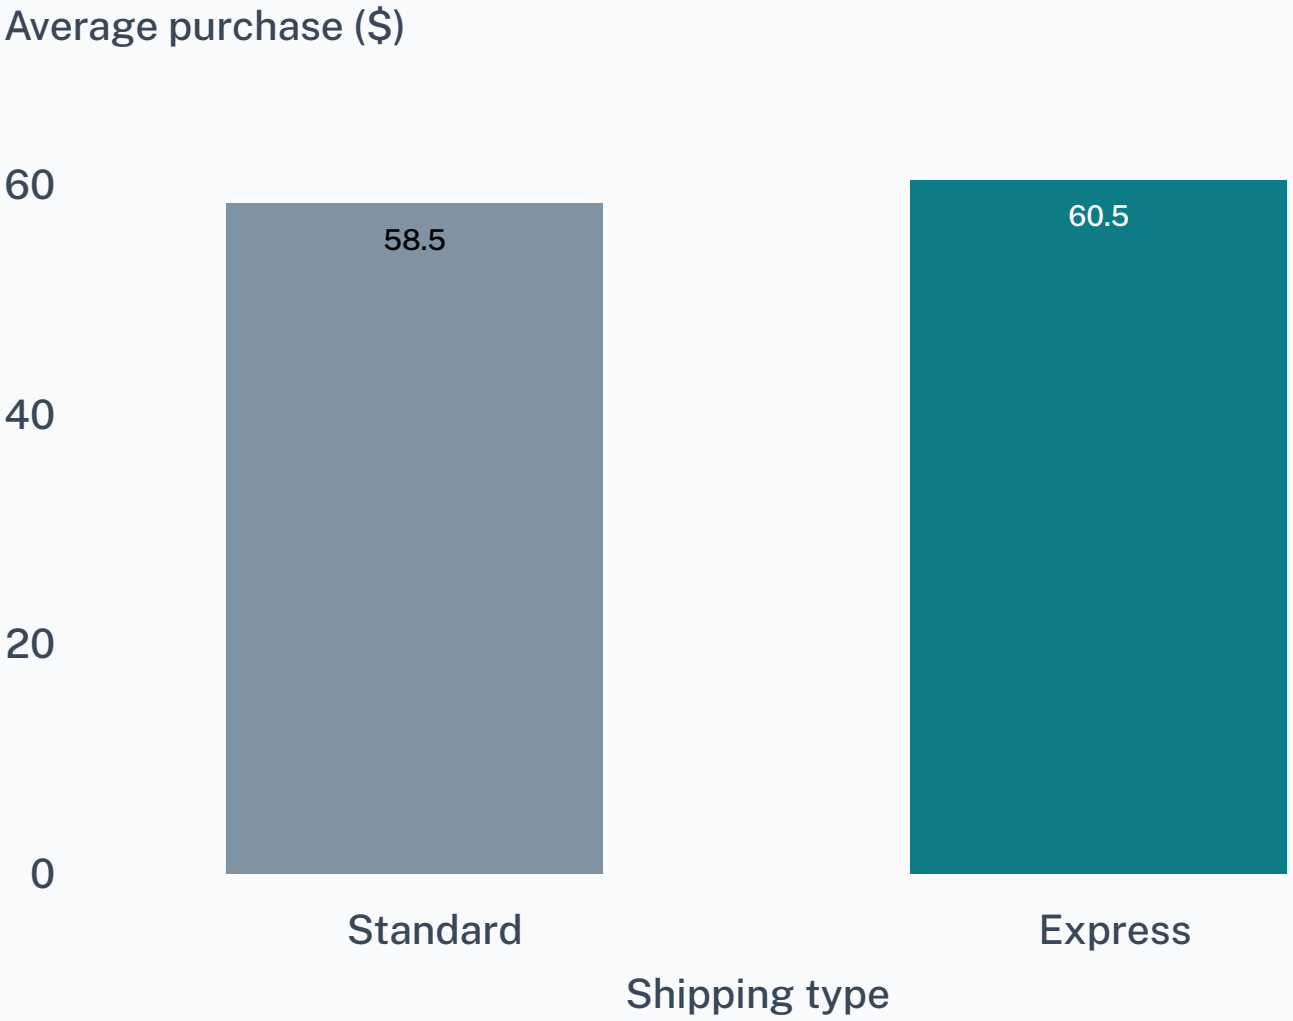

$157,890

Male customers

Use the split as a signal to examine category mix, basket composition, and acquisition performance by gender.

Made with GAMMA

Shipping speed carries a small basket premium

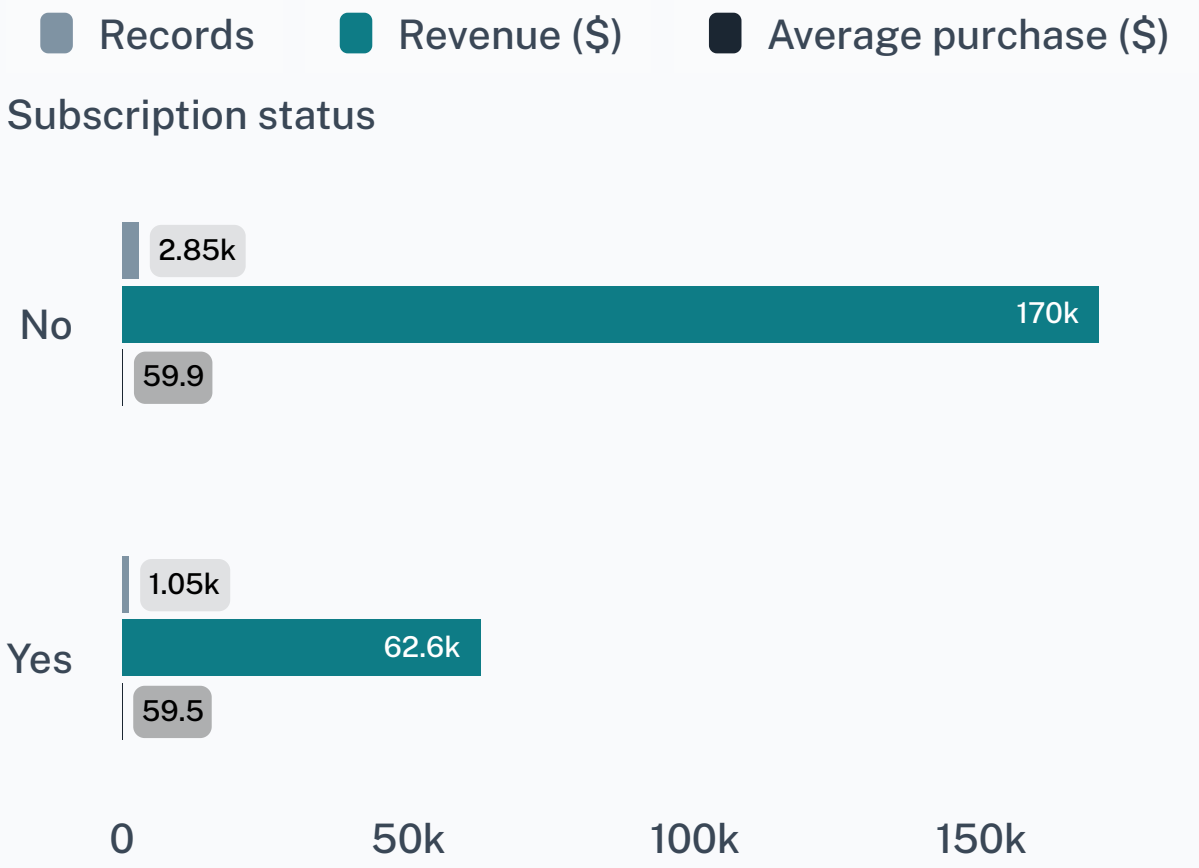

$2.02

Express premium versus Standard

The gap is modest, so test whether convenience drives incremental value before expanding the offer.

Made with GAMMA

Subscribers are a smaller base, not a higher-value basket

2,847

Non-subscriber records

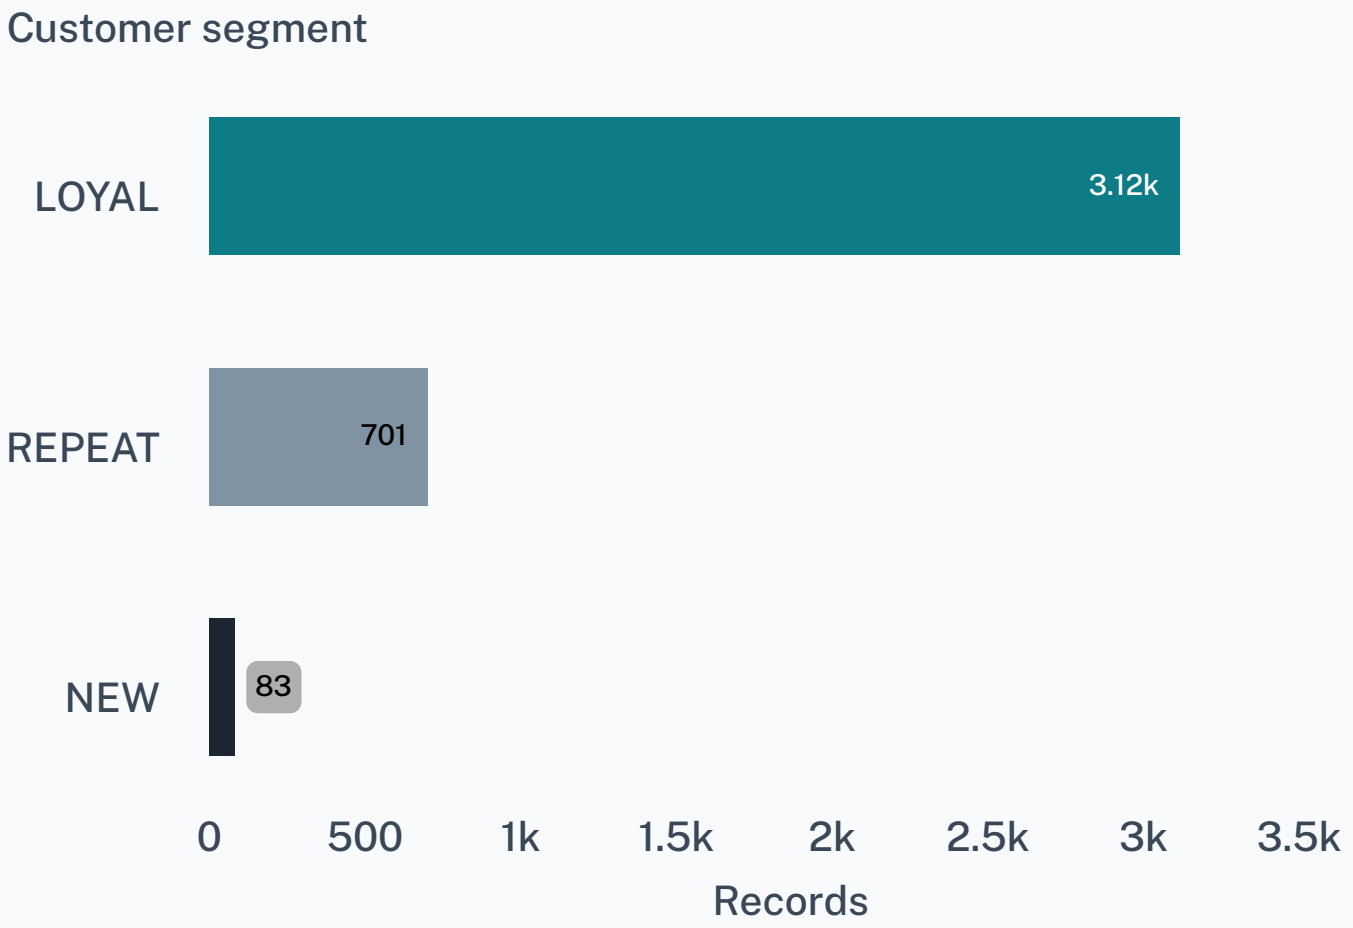

1,053

Subscriber records

Average purchase amounts are nearly identical: $59.87 versus $59.49.

Made with GAMMA

Loyal customers dominate the current segmentation

3,116

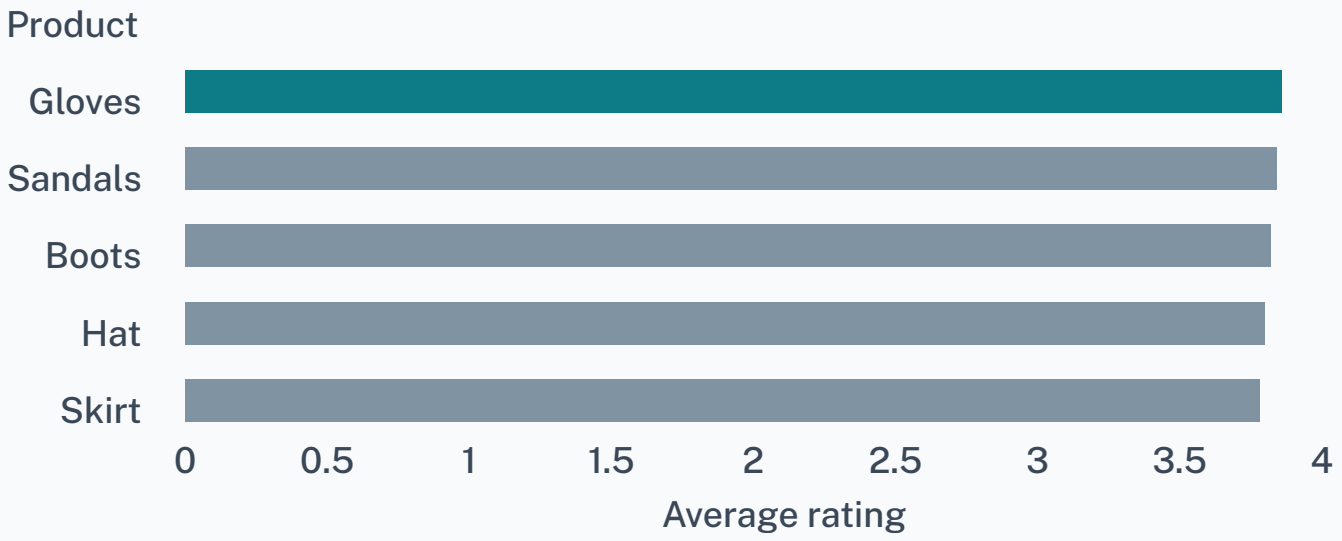

Records classified as LOYAL

The growth question is not only retention: it is how to move NEW customers into repeat behaviour.

Made with GAMMA

Product ratings point to a small set of strong performers

Five products lead the supplied average-rating output.

Use these products as candidates for merchandising, review-generation, or cross-sell tests.
